

**LABUST**

LABORATORY FOR UNDERWATER  
SYSTEMS AND TECHNOLOGIES

# Laboratory for underwater systems and technologies – Overview of Activities

Head: Prof. Zoran Vukić

[zoran.vukic@fer.hr](mailto:zoran.vukic@fer.hr)

Contact: Assoc. Prof. Nikola Mišković

[nikola.miskovic@fer.hr](mailto:nikola.miskovic@fer.hr)

<http://labust.fer.hr>

# Remotely Operated Vehicles (ROV) and Autonomous Underwater Vehicles (AUVs and Gliders)

# Market drivers for maritime robotics

- Energy sector (Offshore oil & gas industry; Offshore wind; Deep sea mining – new player)
- Defense sector – use in Maritime Security, Mine Counter Measure (MCM), Unexploded Ordnance (UXO),; Intelligence-Surveillance-Reconnaissance (ISR), ...
- Scientific research - climate change, hydrography needs, oceanography, environmental research, lately for under ice surveys, ...
- Technological developments in other fields. Technology achievements and innovations in *robotics*, *communications*, *sensors*, and other technologies have matured to the point where new kinds of systems can be commercialized.
- .....

- ✓ *R&D and innovation*
- ✓ *Education*
- ✓ *Promotion of **marine technologies / robotics***
- ✓ *Application in inspection and protection: (a) environment, (b) cultural heritage, (c) fish resources, (d) biodiversity, (e) ports and sailing routes, (f) offshore infrastructures, ....*
- ✓ *R&D and innovation for domestic and foreign SMEs*

## About LABUST

### References:

- ★ Inspections of hydropower dams
- ★ Search and rescue missions
- ★ Underwater archaeology
- ★ Unexploded ordnance (UXO)
- ★ Marine biology/ecology

### International projects - active:

- H2020 SubCULTron (2015 – 2019)
- H2020 EXCELLABUST (2016 – 2019)
- H2020 PLADYFLEET under H2020 RAWFIE project (2016 – 2019)
- H2020 aPad (2017 – 2019)
- BLUEMED (2016 – 2019)
- RoboCom ++ (2017 – 2020)
- CUV-ME project Croatian MoD and U.S.A. DoD (2017 – 2021)
- ECHO e-URready4OS (2017 – 2019)
- NATO SfP: MORUS (2015 - 2018)
- Breaking the surface (2009 – 2018)

H2O Robotics – spin-off company  
established in 2017

## International projects - finished

- |                                |   |
|--------------------------------|---|
| ➤ FP7 CURE (2009 – 2012)       | ➤ FP7 CART (2011 – 2013)  |
| ➤ FP7 CADDY (2014 – 2017)      | ➤ FP7 EUROFLEETS2 (2013 – 2017)                                 |
| ➤ ONRG Dinaro (2014 – 2017)    | ➤ ONRG SPATEL (2015 – 2017)                                     |
| ➤ ONRG SeaJumper (2015 – 2017) | ➤ NATO Autonomous Naval MCM Neutralization System (2011 – 2014) |

LABUST

# Equipment

Side-scan sonar Klein 3500

UNIZG- FER - LABUST

Brodarski institute

Where we experiment

Lake Jarun (Zagreb)

At sea

## Research topics at LABUST

Identification

Enhanced reality

Autopilots  
(course & track-keeping)

Command,  
Communication  
Guidance & Control

Underwater  
technology

Design

Cooperative  
control

Adaptive &  
Robust control

Reconfigurable  
control

Fault tolerant control

Sonars & hydroacoustics

Applied mathematical &  
physical modelling

Underwater  
navigation

Cooperation with Brodarski institute, MoD-Navy, .....

# UXO in port of Gruž (Dubrovnik) – October 2005

## Divers with magnetometers and ROV VideoRay

Findings at the bottom

# UXO in port of Gruž (Dubrovnik)

Total cleaned from the bottom 1,5 tons  
of which ~300 kg UXO

# New berths for cruisers in port of Gruž

Total project value: 24 mil.€

Length: 850 m of new pier

Period: 2006 - 2009

Investment: Port authority Dubrovnik

# Search and rescue

- Fall of the airplane Piper near Long island (Dugi otok), August 2008 (together with the Brodarski institute and Croatian Navy)
- Suicide in the river Sava, Zagreb, 2014 (together with the Police)

LABUST

# Underwater archaeology

- 2007, Senj fortress – the well
- 2008, Rogoznica - „Ninnucia” ship sunken 1942
- 2009, Cavtat, R/N “Giuseppe Garibaldi”
- 2010, Pula – Roman villa rustica and the ship K&K „Viribus Unitis”
- 2010, Hvar (project Triton)
- 2010 – 2012, Kornati (various positions)
- 2011 – 2013 Gnalić, shipwreck of the „Gagliana grossa” from 1583
- 2013, Hvar
- 2013 – 2016, Caesarea, Israel
- 2014, Valgjärv, Estonia
- ....

# Caesarea, Israel, 2015 i 2016 with support of the ONRG

CART – Cooperative Autonomous Robotic Towing system (FP7 Research for SMEs type of project duration 2011-2013) – Coordinator: Posidonia SRL, Genova, Italy

RTD Partners: CNR-ISSIA, Genova, Italy; UNIZG-FER-LABUST, Zagreb, Croatia; DetNorske Veritas AS, Hovik, Norway

SMEs: PKL AS, Tallin, Estonia; SRS Mecano Instalatie SRL, Bucurest, Romania

**Today: 3 most common ways how tug boats pick up the messenger line from the ship in distress**

<http://cart.posidonia.com>

Conventional and future (CART) emergency system

1-5.7.2013 - Tallin experiments

# URready4OS – experiments @ Split

(September 9<sup>th</sup> , 2014. – October 2<sup>nd</sup> , 2014)

The general aim of this project, co-financed by Directorate-General Humanitarian Aid and Civil Protection of the European Commission, is to join forces to make available to European Civil Protection a fleet of AUVs, UAVs and USVs with operational capability to intervene against oil spills in European Seas using new cooperative multivehicle robotic technologies.

# URready4OS – experiments @ Cartagena (June 25 – 27, 2015) „Clara Campoamor”

Robotic system should be able to **self-organize** to improve monitoring of the oil spill **reducing consequences of natural and man-made disasters**

# e-URready4OS – experiments @ Cartagena (June 5 – 10, 2017) „Clara Campoamor”

# Cooperation with NATO Centre for Maritime Research and Experimentation (NATO CMRE) – Autonomous Naval MCM Neutralization System

*Perform maritime mine neutralization more efficiently and cost-effectively using a system of cooperative autonomous vehicles*

**The master/slave type of collaboration between the highly capable ASV or AUV and a low-cost, hence less capable, mine intervention vehicle**

# Vehicles

# CADDY

## Cognitive robotics for divers

First man-machine cooperative system for underwater applications with cognitive capabilities

What?

Set up **symbiotic links** between a human **diver** and a set of companion autonomous **robots** (underwater and surface).

How?

By developing a **multicomponent**, highly **cognitive robotic system** capable of learning, interpreting, and adapting to the diver's behaviour and physical state

AUTONOMOUS  
SURFACE VEHICLE

DIVER

AUTONOMOUS  
UNDERWATER  
VEHICLE

What?

Set up **sympiotic links** between a human **diver** and a set of companion autonomous **robots** (underwater and surface).

How?

By developing a **multicomponent, highly cognitive robotic system** capable of learning, interpreting, and adapting to the diver's behaviour and physical state

# AUV Buddy roles in CADDY

Guide the diver to the desired spot

Observe the diver and concludes about the state of the diver

Help the diver

# Diver robot (AUV) interaction

- Multibeam sonar and stereo camera are used for recording the hand gestures,
- New hand gesture language Caddyman is developed for issuing complex missions to AUV,
- Acknowledge message is issued to the diver through the tablet (on AUV)

	Informative gestures	Command gestures	Interrogative gestures
Static gestures	 <p>"I am OK"</p>	 <p>"Stop"</p>	 <p>"Are you OK?"</p>
Dynamic gest.	 <p>"I am out of air"</p>	 <p>"Come here"</p>	 <p>"Which direction?"</p>

# Diver Net – experiment from 2014

Diver Net enables operator in the command centre to monitor diver movements (posture, hand and legs)

# ONRG project SeaJumper

(Imperial College London and LABUST)

learn & evolve  
long-term  
complexify  
diversify

# subCULTron

<http://www.subcultron.eu/>

Submarine Cultures Perform Long-Term  
Robotic Exploration of Unconventional  
Environmental Niches

*underwater society*  
*electric sense*  
*energy-harvesting*  
*forming sub-cultures*

# MORUS

Unmanned system for maritime security and environmental monitoring

# MORUS - Scenarios 1 & 2

1 – data exchange

2 - cooperative deployment and recovery

*UAV goes to the estimated rendezvous point and data exchange is initiated, ...*

1

*... then UUV continues its mission...*

*... while the UAV flies to the ground station to exchange data.*

**GROUND STATION**

2

RECOVERY POINT 1

DEPLOYMENT POINT 2

DEPLOYMENT POINT 2

*UAV goes to the estimated rendezvous point and recovers the UUV, ...*

*... UAV carries the UUV to the „deployment point 2“...*

*... and deploys it.*

# MORUS

Unmanned system for maritime security and environmental monitoring

**Modular design**

⇒ easy to assemble/maintain on site

**Carbon fibers**

⇒ enhanced weight/strength ratio

**Petrol engines**

⇒ extended autonomy (> 60 min)

⇒ extended payload (50 kg)

**An artistic view of MORUS system in Gazebo simulator**

# CUV-ME project - goals

- Title: **COOPERATIVE UNMANNED VEHICLES IN THE MARITIME ENVIRONMENT**
- Acronym: **CUV-ME**
- Partners:
  - from USA: SPAWAR Systems Center - SSC Pacific (and ONR)
  - from Croatia: MoD-Navy and UNIZG-FER-LABUST
- Project objectives:
  - *Develop enhanced navigation capabilities for maritime vehicles without use of expensive sensors i.e. find a cost effective means for navigation of multiple UUVs in mine counter measure (MCM) and intelligence, surveillance and reconnaissance (ISR) missions.*

# Technology maturity

Start: 4

End: 6 -7

## *DoD TRL definitions*

- **4. Component and/or breadboard validation in laboratory environment**
- **5. Component and/or breadboard validation in relevant environment**
- **6. System/subsystem model or prototype demonstration in a relevant environment**
- **7. System prototype demonstration in an operational environment.**
- **8. Actual system completed and qualified through test and demonstration.**
- **9. Actual system proven through successful mission operations.**

# CUV-ME

- ✓ Cooperation among surface and underwater assets
- ✓ Precise navigation in GPS-denied environments
- ✓ Need reliable communications to cooperate
- ✓ Moving Spiral Beacon Single Message Navigation Aiding for multi-vehicle operations
- ✓ Very High Frequency Omni-Directional Ranging--VOR

*Significant position drift with distance travelled*

### CUV-ME Challenge:

*How to improve navigation of multiple UUVs with the help of a USV and without using expensive sensors !*

# CUV-ME CROWNE 2017 - Experiments in Split, October 23-29, 2017

# *Conclusions*

- LABUST performs R&D and education. These activities are of equal importance to us.
- Our research is applied one.
- LABUST is the leader in the region in R&D for underwater systems and technologies.
- Sustainability is of our prime concern.
- Our projects are innovative and we advance the knowledge and technology in marine robotics.
